

# 01 Sets (Set Concepts)

Mathematics

By the end of the lesson, learners will be able to distinguish between finite and infinite sets using practical examples from their environment.

# Learning goal

By the end of the lesson, learners will be able to distinguish between finite and infinite sets using practical examples from their environment.

Key words: Finite, Infinite, Countable, Uncountable, Elements, Members, Ellipses.

Lesson focus: 01 Sets (Set Concepts)

# Can We Count Everything?

Practical counting of stones.

Attempting to count grains of sand.

Identifying which count can be finished.

Group activity with local materials.

# Defining Our Sets

Finite Set: Has a countable number of members.

Infinite Set: Has members that go on forever.

Examples from daily life.

# Drawing Our Sets

Representing finite sets with all members.

Representing infinite sets with patterns.

Using circles to group elements.

# Mathematical Symbols for Sets

Using curly braces { }.

The "... " symbol (Ellipses).

Writing sets of numbers.

# Test Your Knowledge!

Sorting list of sets.

Justifying why a set is infinite.

Real-life Ugandan examples.

# Check your understanding

Can you tell me exactly how many grains are in that pile of sand?

Which count was easier to finish?

What is a finite set?

What is an infinite set?

Write one answer clearly in your notebook.
