

4.0 Patterns and Sequences (Final Review)

Mathematics

Big question: What is a subset?

Think silently first. Then be ready to explain one idea.

Today's mission

Goal: I can apply all Term 1 mathematical concepts (Sets, Whole Numbers, Operations,

1

Patterns) to complete a comprehensive "Math Mastery Project" simulating a local

2

market scenario.

3

You will use: Setting Up Our Math Market, Mapping the Market Data

4

Success: explain, try, and answer in your own words.

Starter: think first

Think: What is a subset?

1

Pair: compare your first answer with a partner.

2

Share: connect your answer to Setting Up Our Math Market.

Setting Up Our Math Market

Key idea: Concrete Stage: Organizing market items into sets and subsets using stones

1

and sticks.

2

Use stones to represent customers.

3

Group local items into Sets.

4

Identify subsets within the market.

Mapping the Market Data

Watch the example.

1

Draw a Venn diagram of the inventory.

2

Create a price sequence for items.

3

Identify the rule of the sequence.

4

Name the step that helped you most.

Try it together

How many items are in our Universal Set?

1

Can an item belong to two sets at once?

2

Where do we put items that are both cheap and useful?

3

Agree on one answer before writing.

Activity challenge

Group task:

- 1 Students work in groups of five to sort physical objects (stones, sticks, bottles)
- 2 into specific sets and subsets on their desks or the floor to represent market
- 3 inventory.
- 4 Students draw Venn diagrams on paper to represent their sorted sets and write out
- 5 numerical sequences representing the increasing cost of multiple

Exit ticket

Answer: How does math help a market seller in Uganda?

1

Use one complete sentence.

2

Hand in or read your answer aloud.
