

4.0 Patterns and Sequences (Final Review)

Mathematics

By the end of the lesson, learners will be able to apply all Term 1 mathematical concepts (Sets, Whole Numbers, Operations, Patterns) to complete a comprehensive

"Math Mastery Project" simulating a local market scenario.

Learning goal

By the end of the lesson, learners will be able to apply all Term 1 mathematical concepts (Sets, Whole Numbers, Operations, Patterns) to complete a comprehensive "Math Mastery Project" simulating a local market scenario.

Lesson focus: 4.0 Patterns and Sequences (Final Review)

Setting Up Our Math Market

Use stones to represent customers.

Group local items into Sets.

Identify subsets within the market.

Mapping the Market Data

Draw a Venn diagram of the inventory.

Create a price sequence for items.

Identify the rule of the sequence.

Calculating the Market Profit

Multiply items by price.

Sum the total revenue.

Convert large totals to Standard Form.

The Inspector's Challenge

Use divisibility tests for 6, 8, and 9.

Find square roots of perfect numbers.

Apply prime factorisation.

Mastery Presentation

Present project findings.

Solve a final "Mastery Problem."

Reflect on Term 1 progress.

Check your understanding

How many items are in our Universal Set?

Can an item belong to two sets at once?

Where do we put items that are both cheap and useful?

What is the common difference in our price sequence?

Write one answer clearly in your notebook.
