

## 01 Sets (Set Concepts)

How many stones are in my hand?

Think alone

Pair talk

Share one idea

Point to evidence

## Today's mission

I can distinguish between finite and infinite sets

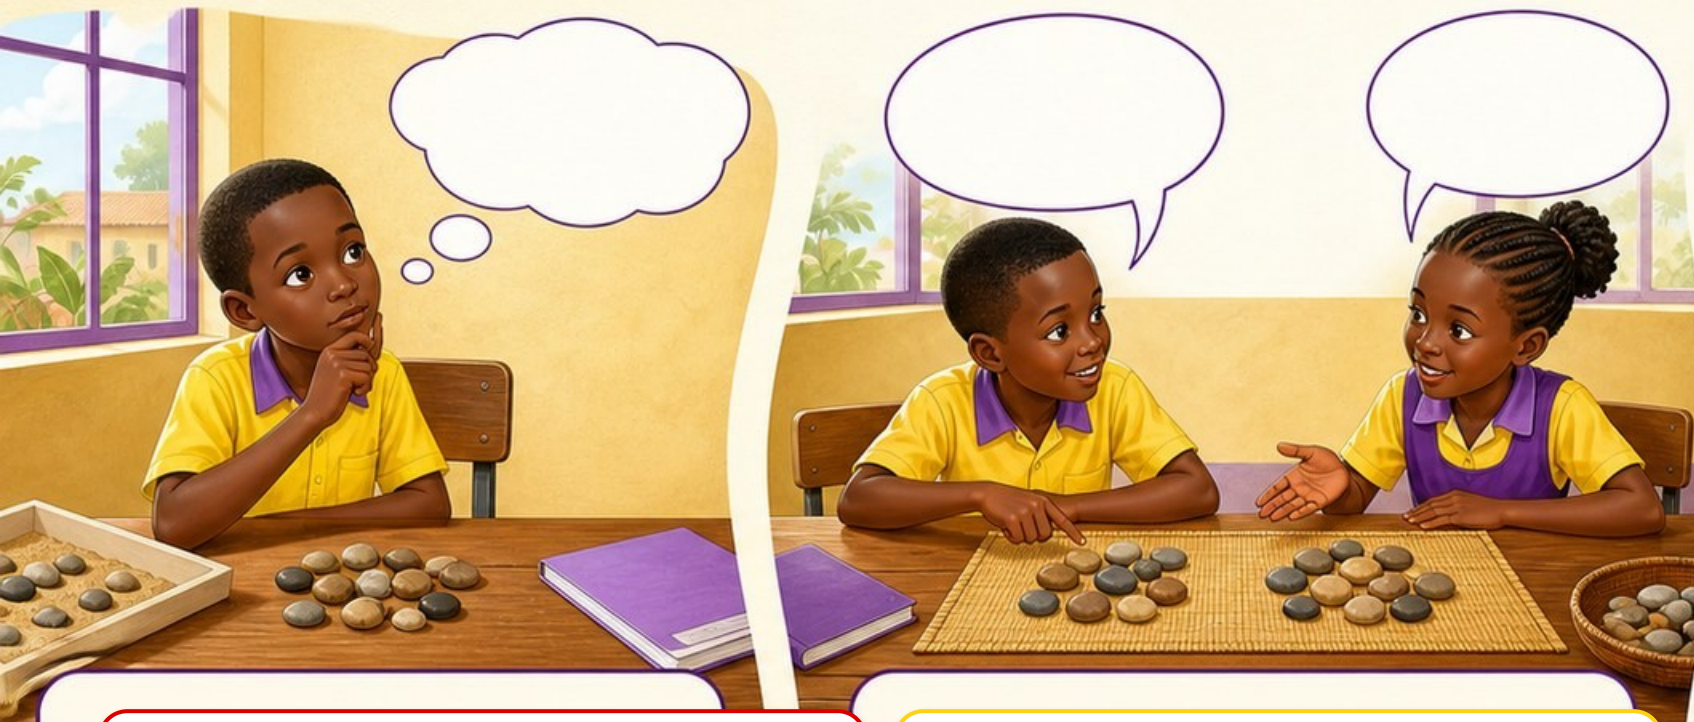

Can We Count Everything?, Defining Our Sets

answer with one reason or example

listen, talk, try, explain

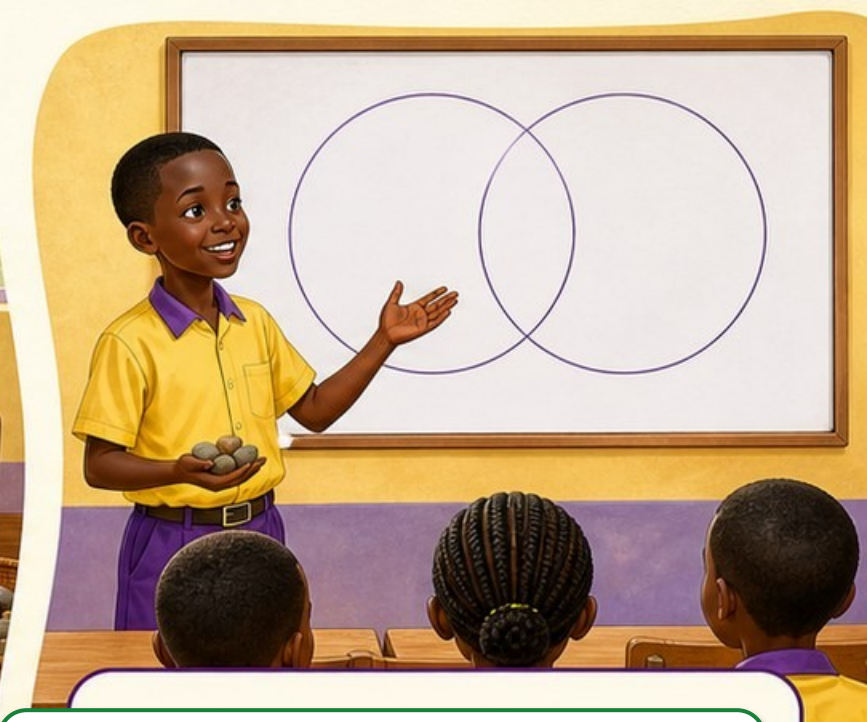

## Starter: think first

How many stones are in my hand?

compare your first answer with a partner

connect your answer to Can We Count Everything?

## Can We Count Everything?

Concrete exploration of countable objects (stones)

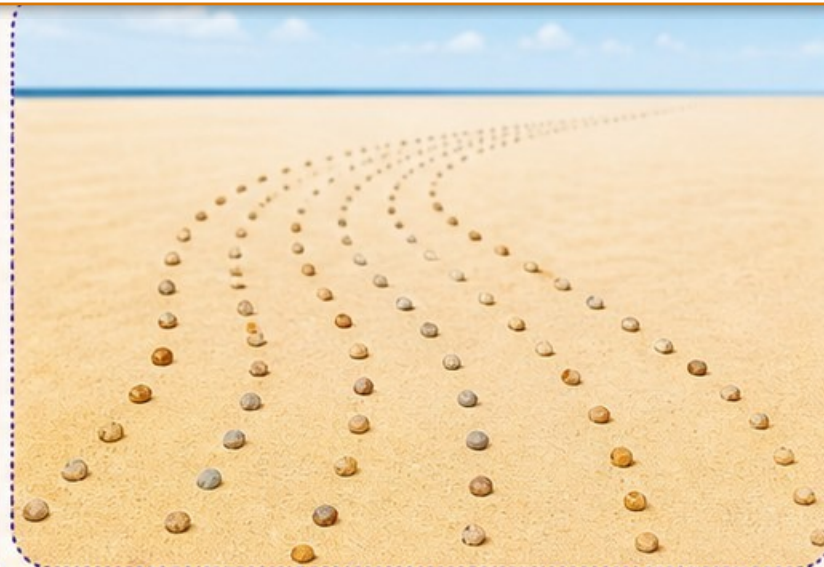

Practical counting of stones

Attempting to count grains of sand

Identifying which count can be finished

## Defining Our Sets

**Finite Set:** Has a countable number of members

**Infinite Set:** Has members that go on forever

**Examples from daily life**

## Try it together

Answer with evidence:

Can you tell me exactly how many grains are in that pile of sand?

Which count was easier to finish?

What is a finite set?

## Activity challenge

In groups of five, learners count a pile of 10 bottle caps and

Write the definitions of finite and infinite sets in their

Draw two Venn diagrams. In the first, they represent

## Exit ticket

**Can a very large set still be finite? (Yes, if it has an end)**
