

3.4 Energy Resources in the Environment

Integrated Science

Big question: Which experiment did you find most challenging?

Think silently first. Then be ready to explain one idea.

Today's mission

Goal: Recalls and identifies key experiments conducted during Term 1.

1

You will use: Looking Back at Our Experiments, How to Write a Science Report

2

Success: explain, try, and answer in your own words.

Starter: think first

Think: Which experiment did you find most challenging?

1

Pair: compare your first answer with a partner.

2

Share: connect your answer to Looking Back at Our Experiments.

Looking Back at Our Experiments

Key idea: Prior knowledge activation regarding Term 1 Science practicals (Skeleton

- 1 models, electricity circuits, and energy resources).
- 2 Reviewing the Muscular-Skeletal model.
- 3 Recalling the Electricity and Magnetism circuit.
- 4 Remembering the Energy Resources (biogas/solar) project.

How to Write a Science Report

Watch the example.

1

Title and Aim (What and Why).

2

Apparatus/Materials (The tools).

3

Procedure (The steps).

4

Name the step that helped you most.

Try it together

What materials did we use to represent the backbone in our model?

1

What is the difference between apparatus and procedure?

2

Why do we need an 'Aim' in our report?

3

Agree on one answer before writing.

Activity challenge

Group task:

1

Students brainstorm in pairs and list all the scientific experiments and models

2

created during Term 1 in their notebooks.

3

Students copy the report structure into their notebooks and label each part based on

4

a verbal example given by the teacher.

5

Students participate in a whole-class exercise to verbally summarize the

Exit ticket

Answer: How does writing a report help you remember the experiment?

1

Use one complete sentence.

2

Hand in or read your answer aloud.
